**Supplemental Box**

In case the space in any of the preceding boxes is not sufficient.

Continuation of:

(2) Novelty: Claims 3,4,15,16

Inventive step: Claims 3,4,15,16

The subject matter of claims 2,8 does not appear to be novel with respect to D1,4.  
The subject matter of claims 1,2,8 does not appear to involve an inventive step with respect to D1,4.

D1,4 disclose monoaminofluorene compounds which are regarded to fall within the definition the general formula [1] and the general formula [2] in present Claim 2. D1,4 also indicate that the above-mentioned monoaminofluorene compounds are organic electroluminescent materials.

(3) Inventive Step: Claims 3,4,15,16

The subject matter of claims 3,4,15,16 does not appear to involve an inventive step with respect to D2,3.

D2,3 disclose monoaminofluorene compounds which is regarded to fall within the definition the general formula [1], and D3-7 also indicate that the above-mentioned monoaminofluorene compounds are charge-transporting materials

Using a charge-transporting material as an organic electroluminescent material is a common knowledge. Therefore, a person skilled in the art would easily realize the monoamino compounds disclosed in D3-7 are organic electroluminescent materials.

(4) Inventive Step: Claims 5-16

The subject matter of claims 5-16 does not appear to involve an inventive step with respect to D1-10.

D1,4 disclose tertiary aromatic amines as organic electroluminescent materials. (see (2))

D2,3 disclose tertiary aromatic amines and the use of the amines as charge-transporting materials. As a charge-transporting material can be used as an organic electroluminescent material, a skilled person in the art would apply the above-mentioned amines for organic electroluminescent materials. (see (3))

D5-10 disclose that polycyclic aromatic hydrocarbon compounds (D5: Column 11 No.(22), D6: Claims, D7: Claims, D8: Claims, D9: Claims, page 7, D10: Claims) are electroluminescent materials. In particular, D5 discloses that tertiary aromatic amines are known to facilitate hole injection and hole transport, and polycyclic aromatic hydrocarbon compounds incorporate into a tertiary aromatic amine hole transporting layer.

Therefore, a skilled person in the art would easily conceive the idea of incorporating polycyclic aromatic hydrocarbon compounds disclosed in D5-10 with tertiary aromatic amines disclosed in D1-4.
